    - Coumadin/Warfarin
- Initial Nutrition Assessments and Follow-Ups
- Development of Nutrition Care Plans
- Nutrition Interventions

## **Rotation Reflection:**

This rotation was a great opportunity for me to practice providing patient educations on various disease states, surgeries, and medications. Clovis Community Medical Center performs nearly 600 weight-loss surgeries per year, making it an excellent learning ground for post bariatric surgery diet educations. In addition, Clovis Community is joined with the Heart Health Hospital, giving interns the opportunity to educate patients heart healthy diets and on drug/nutrient interactions for medications such as warfarin.
