## **Rotation Reflection:**

Having a rotation at Community Medical Center in Fresno was such a privilege. At this hospital, I was given much independence to work on initial and follow-up assessments on various disease states. The floors where I spent the majority of my time were rehabilitation, cardiovascular care, burn unit, and the ICU. This rotation allowed me to become much more familiar within a hospital setting, as well as increased my comfort level while communicating with the hospital staff. This hospital is very team-oriented and gave me the chance to learn about the different duties each member of the health care team has.
